Tell us what your idea is.

This app helps the users to try themselves online without ,by scanning the person and making a 3-D model of the person and trying the clothes on themselves. #AndroidDevChallenge.
By using OpenCV open library or google ARCore WebXR Device API for both augmented reality (AR) and virtual reality (VR), though only the VR features were enabled.

Tell us how you plan on bringing it to life.

- *I have tried developing the app using OpenCV library and it is working until the capturing of image and selecting person .*
- *Now trying to use google ARCore and WebXR Device Api for augmented reality.*
- *Require Google help in making the augmentation of working profile of 3 -D models created.*
- *2-Months for creating augmented model and 2 months for testing of created profiles and 2 months for user feedback using some real users.*

Tell us about you.

I have worked on many other projects as network simulation and communication. I have also created many chat applications for college functions. I have worked as webmaster in Ieee-Bangalore Section.

Thank You
